### **Summary**

### How many times have you submitted to ECOOP?

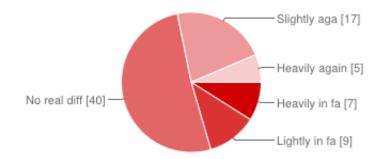

First time 24 30.8% A few times but not many 38 48.7% Consider myself a "regular" 16 20.5%

### Are you an AITO member?

The use of LNCS determines my submitting to ECOOP:

Heavily in favor	7	9%
Lightly in favor	9	11.5%
No real difference	40	51.3%
Slightly against	17	21.8%
Heavily against	5	6.4%

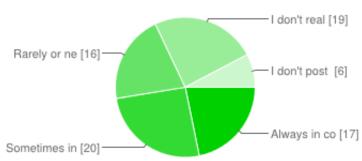

## I know the rules that govern posting copies of LNCS papers on personal or institutional sites.

1 **37** 47.4%

**2 41** 52.6%

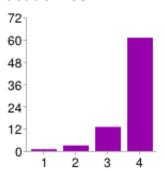

### I post copies of papers on my personal or institutional site:

Always in complete accord with publisher policies	17	21.8%
Sometimes in complete accord with publisher policies	20	25.6%
Rarely or never in accord with publisher policies	16	20.5%
I don't really know what the publishers' policies are	19	24.4%
I don't post copies of papers	6	7.7%

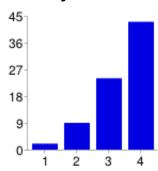

Do you think having free copies of papers available online helps other

#### academics?

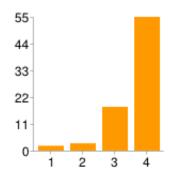

1	1	1.3%
2	3	3.8%
3	13	16.7%
4	61	78.2%

# Do you think having free copies of papers available online helps people in industry?

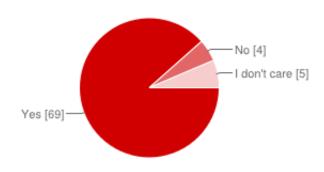

1	2	2.6%
2	9	11.5%
3	24	30.8%
4	43	55.1%

# Do you think having free copies of papers available online helps society as a whole?

1 2 2.6% 2 3 3.8% 3 18 23.1% 4 55 70.5%

### Would you support ECOOP switching to a proper Open Access publisher?

 Yes
 69
 88.5%

 No
 4
 5.1%

 I don't care
 5
 6.4%

### Would you support publishing ECOOP with Dagstuhl LIPIcs?

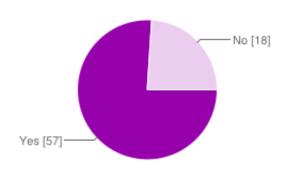

1	5	6.4%
2	11	14.1%
3	21	26.9%
4	38	48.7%

#### Would you support switching next year (2016)?

Yes **66** 84.6% No **8** 10.3%

### Would you support switching this year (2015)?

Yes **57** 73.1% No **18** 23.1%

#### Comments

This is the morally correct thing to do. It will influence me to submit to ECOOP rather than SPLASH.

I am in favor of an open-access publisher as long as it is prestigious and does not take anything away from the importance of this conference

From 2015 onwards, my research institute requires all publications from publicly funded research to be published according to the open-access principle. In facts it is a policy by the national research council of the Netherlands and thus mandatory for plenty of other research institutes as well. I am personally strongly in favour of open-access publishing and thoroughly support your initiative. Furthermore, if ECOOP stays with LNCS, I might not be able to submit to next ECOOP conference due to our new government / institute policies.

time to change. I've dealt with Springer in the past. Awful. Their thinking and technology is out of the 1980s -- last century.

Dagstuhl is a highly reputed institution backed by the German version of the U.S. NSF. the fee is low and open access is offered. What else does anyone need?

The last two "No"s are a bit harsh - I am not in favor of it, but I would consider LIPIcs also as a worthy option.

The most important aspect for me would be the ACM DL entry for the published paper.

Springer provides no value to our community, while we donate our hard work to them. We should switch ASAP.

I am not a huge fan of the specific format / style, but in general in favor of switching to an open access model. Changing in 2015 would affect people who submitted, expecting publication in LNCS, so I would suggest 2016.

Would it be possible to combine Dagstuhl LIPIcs with the arXiv? http://en.wikipedia.org/wiki/ArXiv http://en.wikipedia.org/wiki/Self-archiving

While switching to a different publisher it might be interesting to switch to a more user friendly two columns format.

I have no LNCS subscription, and there are even ECOOP 2014 papers that you can't find via a Google search; it's been a big pain. Let's switch for ECOOP 2015!

Good move, full support.

Switching this year does not seem legit as it is announced after the paper submission deadline. Some researchers may not be positive about it. Before switching, some more details may be worth discussing: - availability of latex template - perceived quality of other publications by the same publisher - any effect on indexing in databases like DBLP and the ACM library?

At ECOOP 87, I was really happy to own a book with my name inside! I must confess that I became, gradually, rather indifferent. I suppose that young authors may still be happy with such a material honor, but the cost of print books is too high for them. I remember that, in Paphos, my proceedings book was stolen in my bag! Obviously, some people still like books... Anyway, I agree it's time to change the way all conferences and journals are published. I don't know Dagstuhl. It's seems to be fine, and I suppose that you compared several possibilities. Best wishes.

I would prefer if ECOOP could switch to an OA journal, even though this would take more time (ECOOP 17 or 18?). I would support Dagstuhl LIPIcs only if there are no valid alternatives for an OA journal, and I would prevent ECOOP from changing publisher twice in a short time.

Thank you very much for considering to support Open Access! The only reason I can accept seeing my work behind a Springer-paywall is the knowledge that the green way (copublication on a pre-print server) ensures that there will always also be a freely available version. I would very much like to spare the hassle by directly publishing on an OA

conference. Unfortunately, there currently seem not to be many of those around. To sum up: If your aim is becoming my favourite venue, then I can hardly imagine a way more effective than going OA.

I fully support switching to an open-access publisher, since, as a PhD student, I do want to have my work readily available for anyone to read, understand and maybe, as a result, cite it. Since I am allowed to publish the paper on my website and my institutional repository, engines such as google scholar or microsoft academic search will make the free PDF versions visible. Still, I don't want to introduce any friction in obtaining the paper, so open access is the best solution. Thank you!

I am in favor of open access publishing. The Open Access charge for Dagstuhl LIPIcs seems reasonable. Additionally, one aspect of LNCS that I am not fond of is its document style. A point in Dagstuhl LIPIcs's favor is that its document style looks more appealing.

PeerJ is starting a Computer Science journal and is also interested in publishing conference proceedings. It might be worth checking out and comparing.

I don't know the details of Dagstuhl LIPIcs, so my answers are more about open access in general.

I strongly welcome the initiative. (Re)publishing papers on institutional websites is hard to do systematically due to overall busyness. A proper publisher would save us time, and increase the ranking of papers in search engines. In particular, I like the LIPIcs idea, as the reputation is important and LIPIcs associated with Dagstuhl has just the right reputation.

Unfortunately, in Slovakia, this is a matter of the publication category. Papers published with worldwide renowned organizations like IFAC, IFIP, IEEE, ACM, IET, SPIE, or worldwide renowned publishers like Springer, Elsevier, John Wiley are a category above regular international conferences.

There are a couple more things that bother me about Springer. First, they recompile LaTeX from source instead of just taking a PDF, and their light edits often do more harm than good. Second, the format (single column text with humongous margins) is a waste of paper when printed.

My institution has no idea of what LIPIcs is, and I worry that papers published there would not be considered in the annual assessment of my productivity.

LNCS is well known and thus makes ECOOP proceedings easier to present to journal heavy committees judging promotions and dismissing conference proceedings. It would make it a harder sell if it is a lesser known publisher. :-(

Gradual change is preferable over sudden change

My main concern with LIPIcs is that the layout is ugly. The text is too wide (too many characters on a line) and there is too much space between lines yielding the impression of a soup of letters rather than a tight block of text. Also, the yellow backgrounds are in poor taste. The LIPIcs website, too, looks ugly and cheap. A secondary concern is that these publications do not seem to be indexed by Web of Knowledge. Another issue is that it seems that ECOOP would be by some margin the most prestigious conference to publish in LIPIcs so far.

It's about time to go open access. Concur has done that for the 1st time this year, after a 25 years marriage to LNCS. I often end up at Springer's site with a 35 euros barrier between me and the paper that I want to read. Now the question about the 15 euros is not clear to me. Do you intend to charge the fee to authors? ECOOP organisers currently pay a lot more to Springer, i believe. Will we see lower registration fees by virtue of moving to a 250 euros proceedings? That would be a very welcome side effect!
